The Columbia Population Research Center (CPRC) at Columbia University is now accepting applications for the **Fragile Families Summer Data Workshop** to be held June 17-19, 2015, at Columbia University in New York City. The workshop is designed to familiarize participants with the data available in the Fragile Families and Child Wellbeing Study, a national study following a birth cohort of (mostly) unmarried parents and their children, providing information about the capabilities, circumstances, and relationships of unwed parents, the wellbeing of their children, and the role of public policy in family and child wellbeing.

The 2015 workshop will include special sections on the newly available genetic data in the Fragile Families Study, and the use of Fragile Families in examining gene-environment interactions in child development and adult wellbeing. The workshop is targeted toward early-career scholars from social and biomedical science disciplines. We particularly encourage applications from junior faculty, postdoctoral fellows, graduate students using the Fragile Families data in their dissertation and minority scholars. Applicants must possess basic quantitative data analysis skills. About 25-30 applicants will be selected. Travel support is available for out-of-town participants, including hotel, which will be booked directly by Columbia.

The Fragile Families Summer Data Workshop 2015 is made possible by Grant Number 5 R25 HD074544-02 from the Eunice Kennedy Shriver National Institute of Child Health & Human Development.
